<b>Project Title:</b>	<b>Concourse B - Maintenance Facilities and Shell Space</b>
-----------------------	---

**Project Description:**  
This project will finish and enclose approximately 21,437 SF of interior space for maintenance shops and future leasable areas on Concourse B.

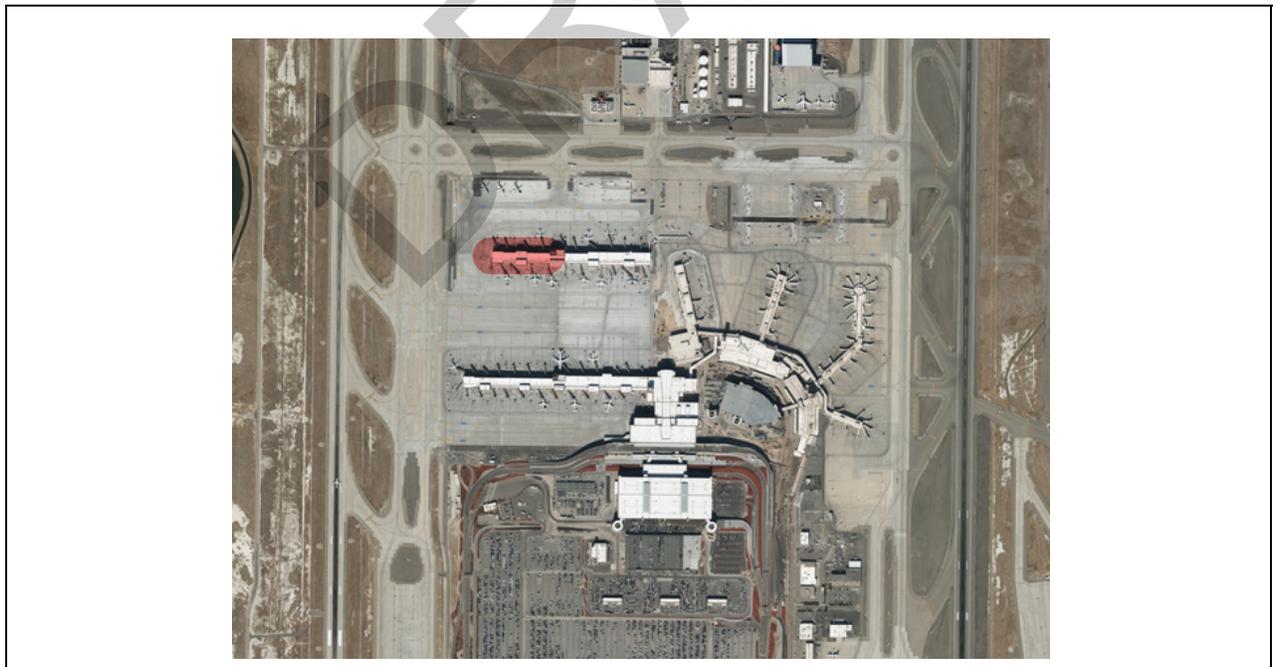

**Project Justification:**  
Current space occupied by maintenance shops on Concourse A have been requested by an Airport tenant.

<b>Project Title:</b>	<b>Stairs to Access Pedestrian Bridges Roofs</b>
-----------------------	--

**Project Description:**  
This project will add a fence at the garage to prevent access to the Gateway roof. The project will also install stair accesses from the Gateway roof to the bridge walkway roofs.

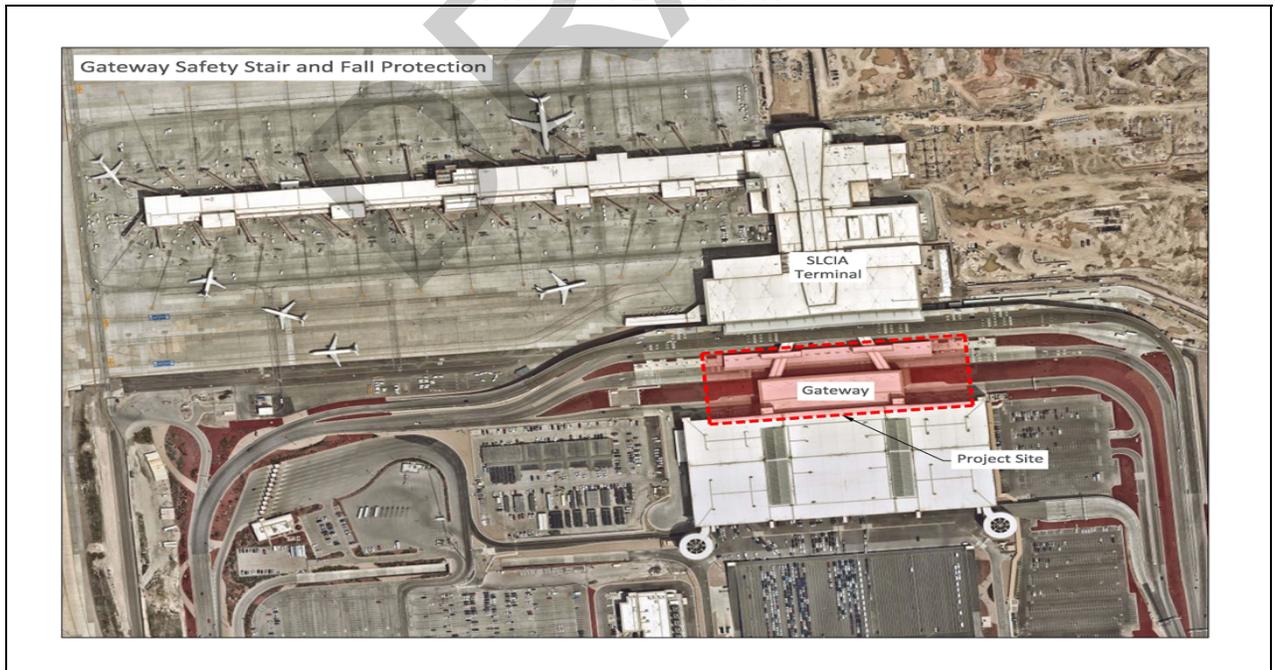

**Project Justification:**  
The existing bridges between the Gateway building and the terminal do not have access to the roofs for maintenance.

<b>Project Title:</b>	<b>Pump House #9 Renovations (Construction)</b>
-----------------------	---

**Project Description:**  
This project will renovate pump house #9.

**Project Justification:**  
The existing pump house needs an additional pump added for capacity due to the increased amount of pavement. A sediment catch basin should also be added.

<b>Design Start Date</b>	<b>Construction Start Date</b>	<b>Project Completion Date</b>

<b>Project Title:</b>	<b>Cylinder Saddle Tanks for Runway Deicer Fluid</b>
-----------------------	--

**Project Description:**  
This project will install 20,000 gallon dual wall Saddle Tanks for potassium acetate (runway liquid deicer fluid).

**Project Justification:**  
Based on inconsistencies with the global economy as well as national supply chain issues, it is in the best interest of the Airport to have on site a one year supply of potassium acetate to counter these unforeseen circumstances. Strategic inventory planning will be essential for future operations.

<b>Design Start Date</b>	<b>Construction Start Date</b>	<b>Project Completion Date</b>

CAPITAL IMPROVEMENT FY 2023 BUDGET**

<b>Project Title:</b>	<b>Gate 39 Reconstruction (Construction)</b>
-----------------------	--

**Project Description:**  
 This project will reconstruct Gate 39 to allow 2-way airfield traffic access and provide a more direct path to the new terminal area apron. Work will include demolition of existing asphalt pavement, unclassified excavation, placement of engineered fill, placement of new portland cement concrete pavement, constructing a 10-ft x 30-ft guard enclosure, prefabricated canopy, and installation of CASS and CCTV related equipment. Also included is providing water, sewer, electrical, and communications to the guard shack.

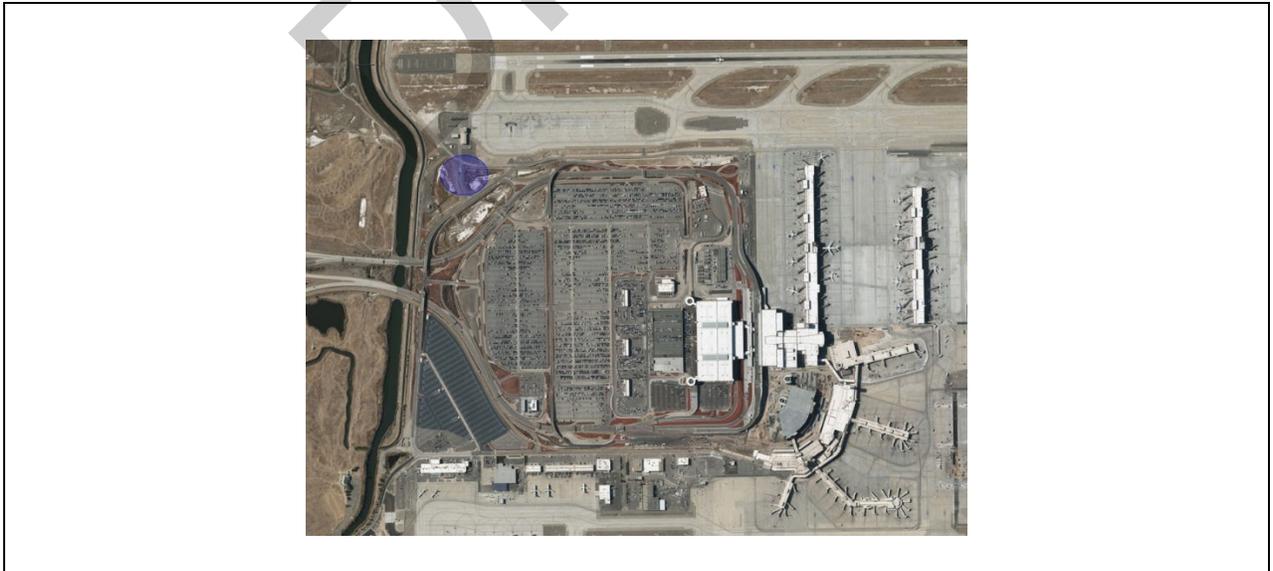

**Project Justification:**  
 Gate 39 provides access to the new terminal area apron from the southwest side of the Airport. With the current demolition of the Airport facilities under the Terminal Redevelopment Program, there is an increased need to provide essential services to the new terminal area apron from the west side of the Airport. Increased commercial vehicle traffic at existing Gate 40 has caused operational and safety issues with vehicles having to wait within the taxilane object free area of Taxilane 1. This project will modify existing Gate 39 to allow for more capacity through the gate and Gate 40 will be eliminated as an airfield access.

<b>Project Title:</b>	<b>SkyWest Hangar Taxilane Reconstruction</b>
-----------------------	---

**Project Description:**  
This project is a continuing phase to maintain the Airport's infrastructure. The project will consist of building a temporary taxilane to the SkyWest Hangar to maintain access while the existing taxilane is reconstructed. The reconstructed taxilane will include new base course, lean mix concrete, and 16" portland cement concrete pavement. After the reconstructed taxilane is complete, the temporary taxilane will be removed and the infield area graded.

**Project Justification:**  
The existing taxilane is failing and continuous spalling is creating a FOD hazard for all aircraft in the area. The extent of the damage is to the point where repairs by Airport Maintenance are not lasting because of the pavement condition. Reconstructing this taxilane will provide a new safe entrance for aircraft using the SkyWest maintenance facility and reduce FOD potential for aircraft on Taxiway F in the vicinity of the taxilane.

<b>Project Title:</b>	<b>Taxiway E Reconstruction F1-F2</b>
-----------------------	---------------------------------------

**Project Description:**

This project is a continuing phase to maintain the Airport's infrastructure and bring the taxiway geometry to current FAA standards. The project will consist of replacing the pavement on Taxiway E between Taxiways F1 and F2. Work will include demolition of existing concrete pavement and econocrete base, unclassified excavation, placement of engineered fill, placement of new econocrete base course and new Portland Cement Concrete. Also included is pavement marking and reinstalling in-pavement centerline and taxiway edge lights complete with new underground cabling and connectors.

**Project Justification:**

Taxiway E connects Runway 16R-34L and Runway 16L-34R with the terminal area. It has a high volume of aircraft use because it serves as a major taxi route for arriving and departing aircraft. The taxiway concrete panels are showing signs of pavement distress including surface spalling, full depth slab cracking, and corner breaking. The Pavement Condition Index (PCI) for this section of pavement has a rating ranging from 57 - 66 indicating that the pavement is in fair condition. This area has received multiple patches where the concrete has settled indicating possible base failure. This project will make a significant contribution to safety and capacity by ensuring that the taxiway pavement integrity is preserved and minimizing FOD.

<b>Project Title:</b>	<b>South Valley Regional Airport Hangar Site Development</b>
-----------------------	--

**Project Description:**  
This project will widen an existing taxilane north of the existing shade hangars and construct a new ramp complete with underground utilities for a proposed future site for T-hangars at the South Valley Regional Airport (SVRA).

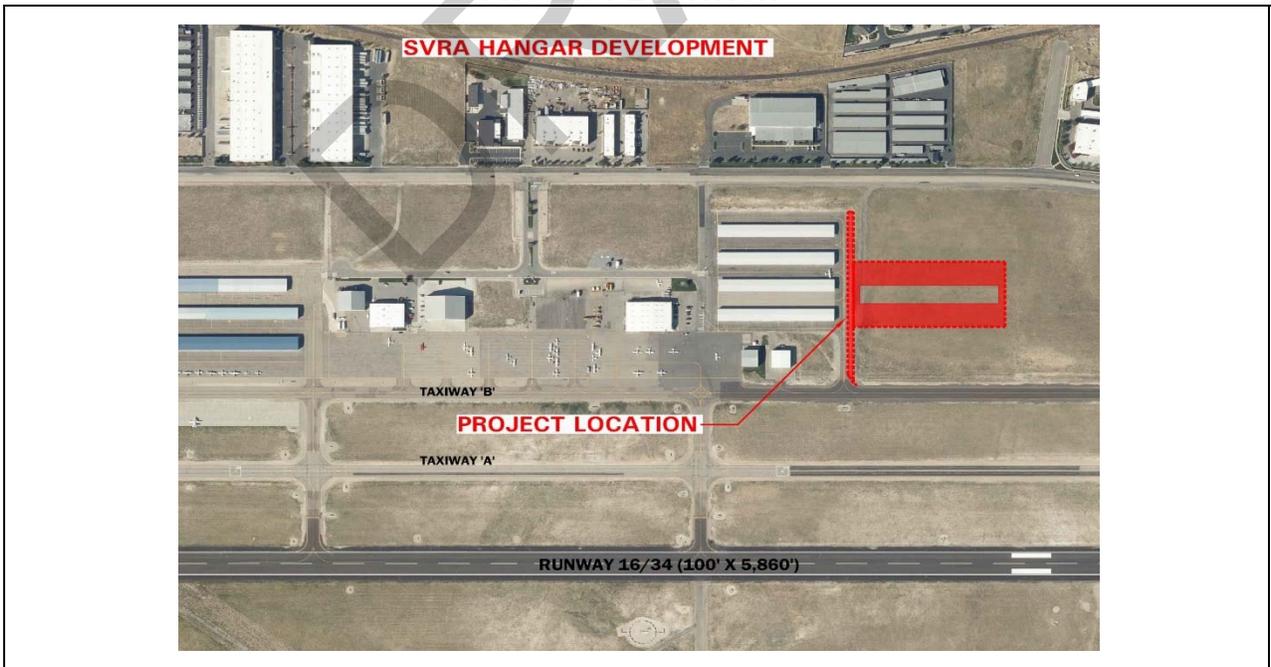

**Project Justification:**  
An existing taxilane north of the shade hangars will be widened approximately 21' to accommodate Group II aircraft to access a new 280' x 575' ramp where future T-hangars will be constructed. New underground utilities consisting of gas, power, communication, water, storm drain, and sewer will be installed and stubbed up to within 15 feet of the future T-hangars.

<b>Project Title:</b>	<b>Skydive Utah Taxilane and Apron</b>
-----------------------	--

**Project Description:**  
This project will construct a new 270-foot long x 35-foot wide taxilane and a 75-foot x 100-foot apron for a future hangar facility for Skydive Utah. This project will include excavation and removal of existing material, storm drain installation, import of engineered fill, new asphalt pavement, and painting.

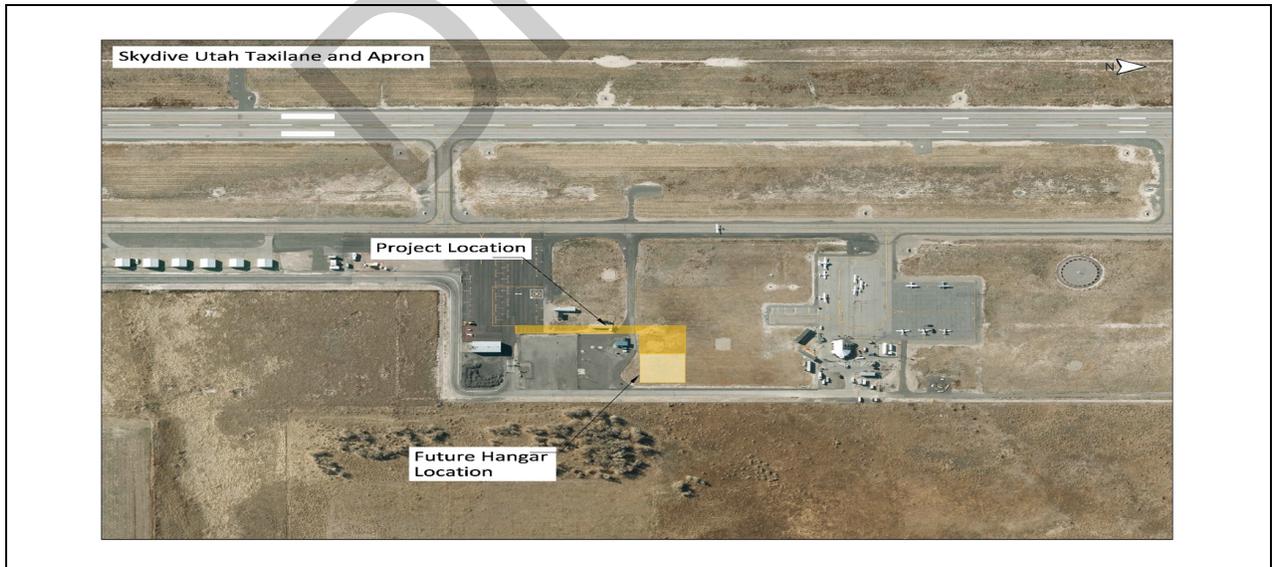

**Project Justification:**  
Skydive Utah, one of two tenants currently operating from the Tooele Valley Airport (TVY), is wanting to expand their operations. They currently rent the aircraft they are using and are wanting to purchase it. In order to protect their investment, they want to build a hangar facility large enough to store the aircraft. This project will build a taxilane and apron at a location at TVY that will accommodate the proposed future location of the Skydive Utah hangar. This project will enable the first phase in a series of investments that Skydive Utah is planning to make at the airport.

<b>Project Title:</b>	<b>South Valley Regional Airport Vitek Hangar Apron Construction</b>
-----------------------	--

**Project Description:**  
This project will construct a new 160-foot x 90-foot apron for a future hangar for Vitek. This project will include the excavation and removal of existing material, storm drain installation, import of engineered fill, installation of hangar utilities to the lease line of the facility, and construction of a new asphalt apron.

**Project Justification:**  
Vitek is wanting to expand their operations to the South Valley Regional Airport (SVRA). They are currently negotiating their lease and want to break ground on this facility next year. This project will build an apron at SVRA that will accommodate the proposed future location of the Vitek hangar.

<b>Project Title:</b>	<b>Booth 10 Restroom Installation</b>
-----------------------	---------------------------------------

**Project Description:**  
 This project will install a gender-neutral restroom facility near Booth 10. Booth 10 is a staffed gate that controls the entry of vehicles to the two commercial lanes in front of the Terminal. It is staffed in order to assist vehicles that need access to quickly enter without blocking other traffic and also to help redirect vehicles that queue at this entrance in error to be rerouted to the public lanes for pickup or dropoff. This restroom will be designed to be a single room with water and sewer hookup and ADA compliant. The project includes costs for a premanufactured structure, foundation, and utility connections to the new facility.

**Project Justification:**  
 Booth 10 is currently staffed by Landside Officers 24/7. When restroom breaks are needed, posted personnel must call for relief and walk to the restrooms inside the Terminal. Original Airport Redevelopment Program plans included a restroom at Booth 10 that was value engineered out of the program. This restroom will greatly benefit the operational needs at this staffed gate.

<b>Project Title:</b>	<b>Ground Transportation Staging Lot Study &amp; Modifications</b>
-----------------------	--

**Project Description:**  
 This project will study the recently completed Ground Transportation (GT) Staging Lot by evaluating the current conditions and designing changes to improve safety and minimize conflicts in the lot. Currently GT, Transportation Network Companies (TNC), and bus traffic all use a central roadway going through the center of the GT lot. Airport Operations has observed that most vehicles are not obeying posted speed limit signs in the area. A study will be completed to include all stakeholders. The study will be used to prioritize recommendations to improve safety within the lot.

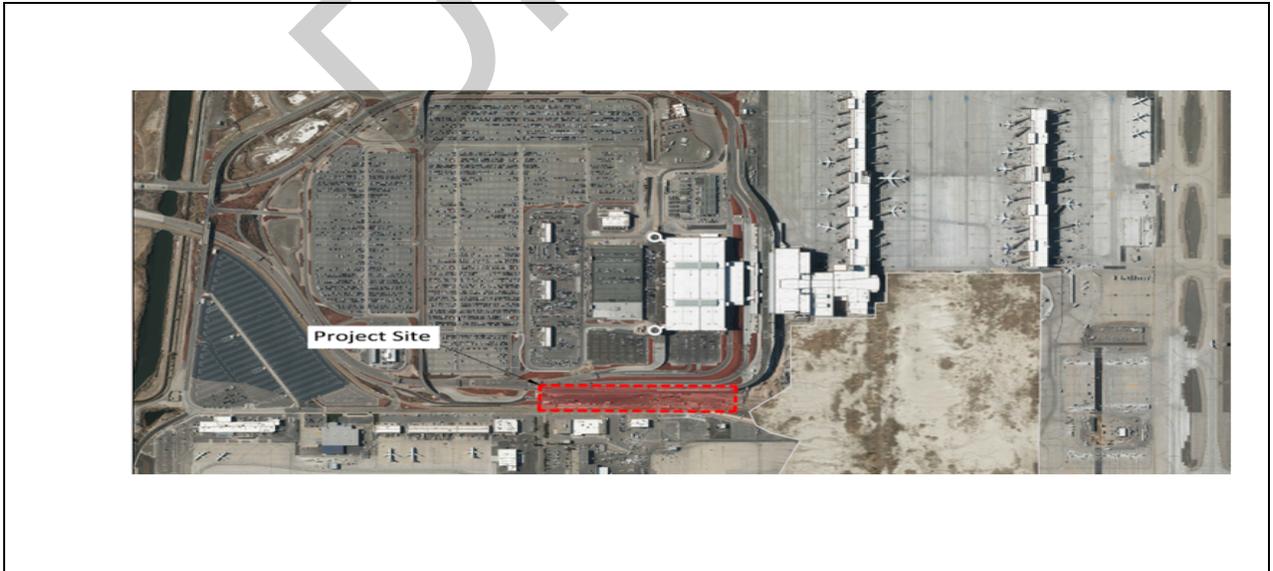

**Project Justification:**  
 Both TNC and GT traffic currently use the GT lot and the present design allows for traffic to proceed through the lot at speeds that are much higher than the current 10 MPH posted speed limit. The modifications to the lot resulting from the study will improve safety and traffic flow in the area.

<b>Project Title:</b>	<b>Park and Wait Lot Expansion</b>
-----------------------	------------------------------------

**Project Description:**  
This project will expand the Park and Wait Lot's parking capacity and reduce traffic congestion and safety concerns. Work will include demolition of existing curb and gutter, and removal of existing landscape, irrigation, and berm. New construction will consist of storm drainage installation, imported engineered fill, concrete curbing, asphalt paving, pavement marking, and new irrigation and landscaping, electrical, fiber, and parking lot lights and electronic Flight Information Display Sign (FIDS) installation.

**Project Justification:**  
GateThe parking and usage of the Park and Wait Lot has increased significantly over the past several years and has reached it's maximum capacity at peak passenger pickup times during both day and nighttime operations. Additional parking is needed to accommodate peak travel times and help reduce traffic congestion within the Park and Wait Lot and at the Terminal pickup and drop off lanes. This will also discourage parking and waiting along the airport entrance roads that is currently happening.

<b>Project Title:</b>	<b>Terminal Front Access Road Improvements</b>
-----------------------	--

**Project Description:**  
 This project will expand the curb area for the Ground Transportation B Lane and arrivals curb to reduce traffic congestion and safety concerns. Work will include demolition of existing curb and gutter, barrier wall, landscaping and irrigation, pavement marking removal, and unclassified excavation. New construction will consist of the placement of engineered fill, asphalt roadway patching, new barrier wall construction, concrete sidewalk, pavement markings, reconfiguration of irrigation lines and restoration of landscaping, and installation of steel fencing.

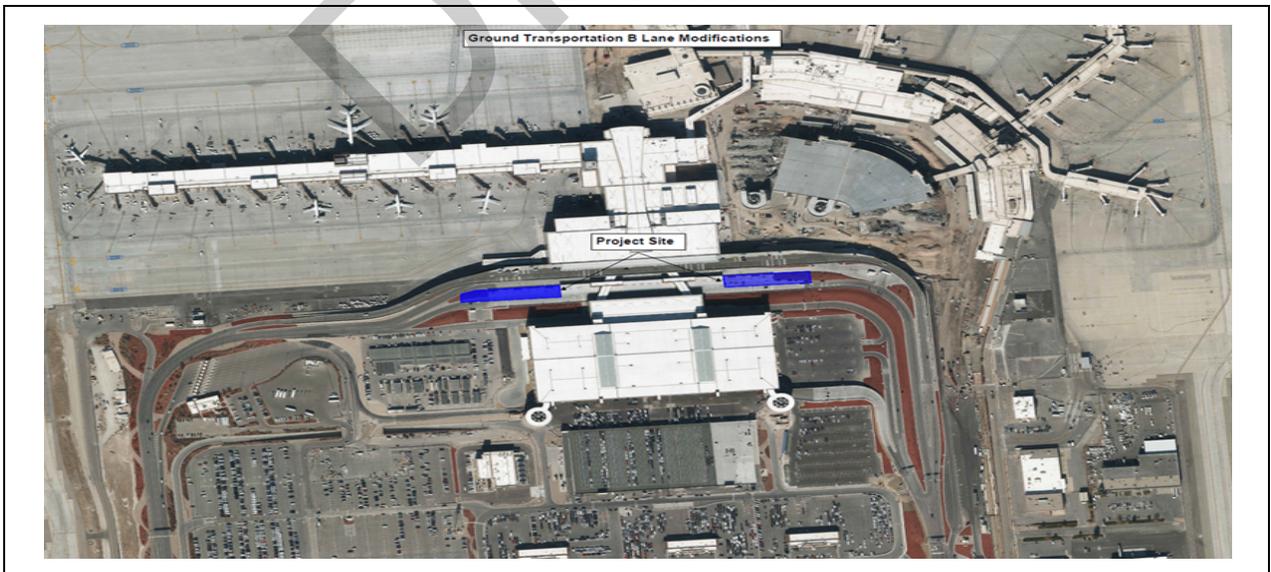

**Project Justification:**  
 The B Lane is a pick up and drop off lane in front of the Terminal for charter buses, Lyft, and Uber which frequently fills to capacity causing overcrowding and safety concerns. This project will expand the available curb area of both the Commercial Traffic B Lane and the west end of the arrivals curb for vehicle pull out and reduce traffic congestion.

<b>Project Title:</b>	<b>Electrical &amp; Communications Duct Bank from AOC to Gate 7</b>
-----------------------	---

**Project Description:** The Rocky Mountain Power (RMP) has requested the Airport replace damaged sections of the Jordan 14 electrical circuit ductbank so that RMP can install new primary power conductors. This project will install approximately 4,800 LF of 8-way 6-inch electrical ductbank. The ductbank will begin west of Runway 17/35 and run westbound just south of the South Electrical Airfield Vault and end southeast of the Airport Operations Center (AOC). Included with this work is the repair of collapsed conduits at the 2200 West and 2400 West intersections with North Temple Street. Along with the electrical ductbank, the project will also install a new 8-way 4-inch communications ductbank parallel to the electrical ductbank. A total of eight each new electrical vaults and communication vaults (3 aircraft rated and 5 non-aircraft rated) will be required along the new ductbank alignment. The project will also include Subsurface Utility Engineering (SUE) with nondestructive digging equipment during design to identify utility conflicts and mitigate associated risks.

**Project Justification:** The Jordan 14 electrical circuit is a critical power feed for the Airport with conductors that have been compromised by collapsed conduits in several locations. The existing conduit damage creates a high level of risk in the event of a conductor failure which would require a complicated repair by making it difficult or impossible to remove and replace the circuit conductors. The result of a failed conductor on the Jordan 14 circuit could be a lengthy power outage (or partial outage) at the Airport while sections of the conduit are being repaired. A new communications ductbank is also required due to existing communication pathways being full. The communication ductbank will allow for future expansion of the Airport's IT network to locations in the General Aviation (GA) area and other facilities in the general area. There will be a savings of time and money by co-locating both ductbanks at the same time.

<b>Project Title:</b>	<b>Electric Vehicle Charging Stations (FY2023)</b>
-----------------------	--

**Project Description:**  
SLCDA has created a Master Plan to inform a phased installation program for Electric Vehicle Charging Stations (EVCS) relative to the annual purchase of electric vehicles in Utah. For the past several years, the airport has received rebates from Rocky Mountain Power and grants from UCAIR which have reimbursed 50% of the cost to purchase and install EVCSs on the airport campus. This year the airport will apply for funding incentives to install infrastructure for eight Level III EVCSs for the Airport Operations fleet.

**Project Justification:**  
Salt Lake City is designated as a Serious Nonattainment Area for EPA's 24-hour standard for particulate matter PM2.5. Fine particulate matter, or PM2.5 is an air pollutant resulting from motor vehicle emissions that contribute to respiratory problems. The project will promote additional options for sustainable transportation and will reduce area emissions that contribute to fine particulate matter. The Airport is proposing to install infrastructure and purchase eight Level III EVCSs at the Airport Operations Center. This project will result in significant emissions reduction based on the Operations Division's vehicle use which averages 100 - 125 miles per day.

<b>Project Title:</b>	<b>South Employee Parking Lot Development Program (Design)</b>
-----------------------	--

**Project Description:** This program will implement a series of projects over the next 5 years that will allow for the development of the Southern Open Space (Former Golf Course) into an employee parking lot as shown on the new SLCIA ALP. Phase 1 of this project will design the relocation of the surplus canal. This phase is intended to complete the design and permitting requirements set forth by the USACE. Phase 2 will be to mitigate the wetlands in the area which to allow for the new canal to be relocated. Phase 3 will be to relocate the canal to the south, parallel to the existing TRAX line. Phases 4 and 5 will then design and build the infrastructure, parking lot, roadways, and employee screening facility required to operate the South Employee Parking Lot.

**Project Justification:** The recently completed SLCIA master plan identified that a new employee parking lot will be needed to accommodate the forecasted increase in employee numbers at our facility. The existing South Employee Parking Lot will be reutilized to accommodate the forecasted increase in passenger parking. With passenger numbers already approaching past 2019 numbers and the airlines expecting to increase both their operations and employee numbers at SLCIA, the need to expand our parking has been exceledated. There currently is not enough parking to sustain peak days. This program will provide an immediate and long-term parking solution.
